

Why Composite Tubes?

With a wide range of product packaging available it can be overwhelming for a manufacturer to know which packaging solution is right for them.

Below are the key points as to the benefits of Composite tubes:

1 Product Protection

Composite tubes are a practical way to keep your products safe...

with a bespoke fitting (if required) and shapes and sizes to meet almost any requirement, your product is protected throughout all aspects of transit.

2 Visual Appeal

With the use of high-quality print and a range of available print enhancements the composite tube creates a high degree of visual disruption and definitive sensory cues...

standing out from the crowd and drawing in the consumer.

3 Recyclability

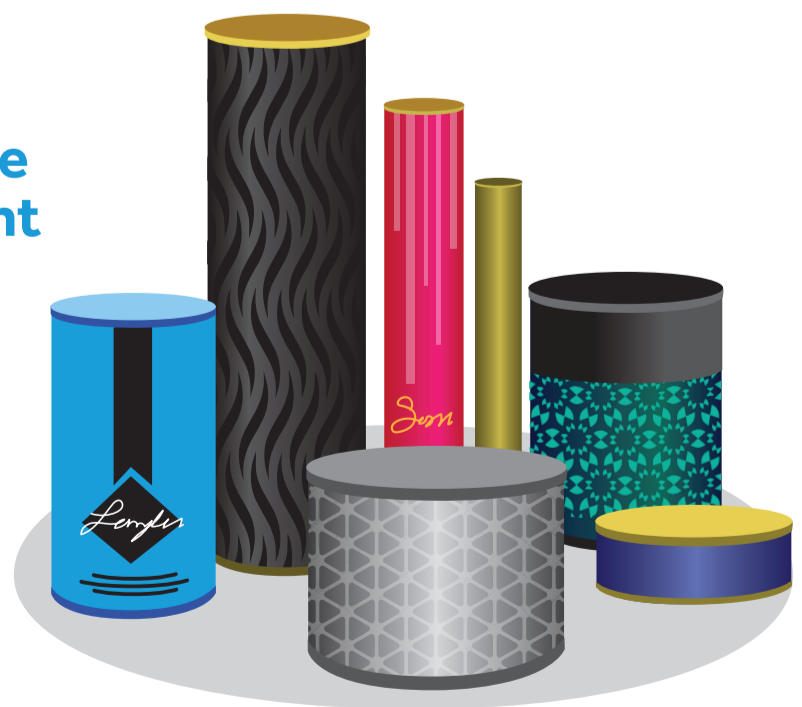

At Smurfit Kappa Composites our composite tubes are made from 100% recycled paper and are fully recyclable – no plastic here!

4 Flexibility

Composites round tubes are available in various heights and diameters, and our multi-layer shaped tubes can be produced to virtually any shape and laser cut to create an aperture or window feature.

Both tube styles are available with 6 colour high quality print and additional decorative options.

The Composite tube is ideal for use with fragrances, skincare, premium spirits, champagnes, liqueurs and a premium gift option for almost any product.
